

## *Digital Diaspora Network Latin America and the Caribbean*

### *How Technology Creates New Opportunities for Advancing the Region*

The history of technology is marked by transformation, but only when changes become disruptive can we change the game. Disruptive technologies are required to create irreversibly transformation in Latin America and the Caribbean. The two key technology components of disruptive transformation, in this case, are ACCESS and COLLABORATION.

### *Access can be achieved via a data broadcast technologies*

The founders of inViVo Vision have long worked on specialized technologies for access to knowledge and information via technology where access is nearly impossible or cost prohibited. Data broadcast technologies can be implemented with as little as a TV set and a digital set-top box. Such solutions can not only bring about equity of access, but can also improve the quality of the educational content that is made available, because such content must be conditioned for delivery and in that process with an increased focus on fresh content an opportunity for quality education is created. We can indeed provide quality and access. The tools exist to provide this transformation, but we must first create the collaboration, aided by technology, that will irreversibly transform the region by changing the way in which we approach the problem.

EDUCATION IS ESSENTIAL FOR PROGRESS:

TRANSFORMATION REQUIRES COMMITMENT,

ACCESS AND COLLABORATION.

### *Collaboration technologies are the tools of teamwork*

The right kind of collaboration tools can make the difference between transforming the region and merely demonstrating the possibilities. A powerful collaboration tool, that can be used in concert with the digital data broadcast technologies will complement and realize the needed massive solution. It is not enough to be able to reach via effective use of technologies, we must also be able to scale to the universal needs of an education infrastructure. We must provide education for all grades and for all subject areas, training, information and skills development for disruptive transformation of the region. Collaboration tools as we know them and understand them are insufficient to meet the needs of a global and universal educational infrastructure. We must deploy specialized collaboration tools.

### *InViVo Vision is a vision for a world-wise future with technology*

At inViVo Vision, a team of dedicated researchers are working to provide the world with transformational technologies that will change the way we live and work. We are committed to transforming the future with technology. This is a real goal and we have real technologies to achieve it. Contact us for more information.
